

NIH...Turning Discovery Into Health®

Impulsivity and the developing brain

Do you....

- Blurt out comments at inappropriate times?
- Interrupt conversations or speak out of turn?
- Feel you are overly impulsive?

The National Human Genome Research Institute (NHGRI) is conducting an outpatient research study on the effect of impulsivity on the developing brain in young adults.

What the study involves:

- A visit, lasting 2 to 8 hours to the outpatient clinic at the NIH Clinical Center
- Brain scan (without radiation)
- Tests of learning and memory
- Blood draw or saliva sample for genetic tests

Compensation and transportation assistance may be provided

The NIH Clinical Center
America's Research Hospital
located in Bethesda, MD
Medical Center Metro Stop (red line)

Participants may qualify if:

- ✓ Between ages 18 and 30
- ✓ Medically Healthy
- ✓ Live in the DC, MD, VA region
